Newsflash

Dear Reader

The "Nanorama Laboratory", a free, interactive online tool on the safe handling of nanomaterials, is now **available in English** on <http://nano.dguv.de/nanorama/bgrci/en/>. The tool, developed in close collaboration with the German Social Accident Insurance Institution for the raw materials and chemical industry (BG RCI), was devised by the Innovation Society, St. Gallen.

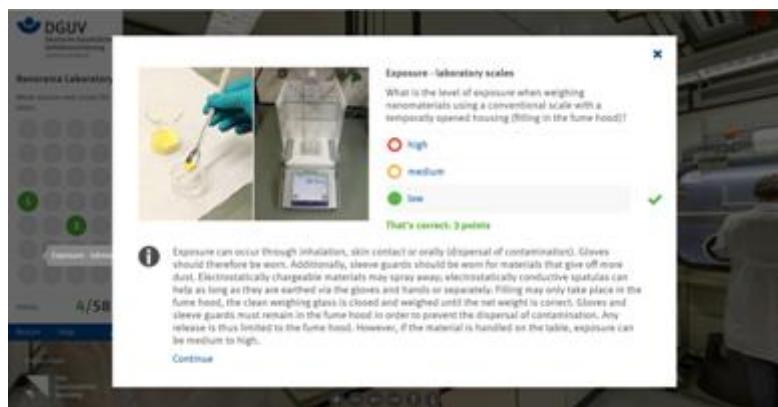

In case you are interested in **further information** or if you intend to publish an article do not hesitate to contact us. We are looking forward to receiving your feedback.

Kind regards
The Innovation Society

"Nanorama Laboratory": Free Online Tool on Safe Handling of Nanomaterials Now Available in English!

(St. Gallen / Heidelberg) The "Nanorama Laboratory" (<http://nano.dguv.de/nanorama/bgrci/en/>) is one of three interactive educational tools available on the Nano-Platform "Safe Handling of Nanomaterials" (<http://nano.dguv.de>; to date, the platform and the remaining "Nanoramas" are available in German). The "Nanorama Laboratory" was developed by the Innovation Society, St. Gallen, in close collaboration with the German Social Accident Insurance Institution for the raw materials and chemical industry (BG RCI). It offers insights into the safe handling of nanomaterials and installations used to manufacture or process nanomaterials in laboratories. Complementary to hazard evaluation assessments, it enables users to assess the occupational exposure to nanomaterials and to identify necessary protective measures when handling nanomaterials in laboratories.

«Due to the attractive visual implementation and the interactive contents, the “Nanorama Laboratory” offers a great introduction to protective measures in laboratories», says Dr. Thomas H. Brock, Head of the Expert Committee on Hazardous Substances of the BG RCI. The “Nanorama Laboratory” inspires curiosity in users and instigates them to reflect on the conditions in their respective workplaces. «By exploring the “Nanorama Laboratory”, laboratory staff actively deals with occupational health and safety in laboratories and its practical implementation with regard to nanomaterials.»
