

Dear Reader

The „Nanorama Lab“, an interactive online tool on safe handling of nanomaterials, is now available to the public on <http://nano.dguv.de/nanorama/bgrci/> (currently only available in German). The tool, developed in close collaboration with the BG RCI, was devised by the Innovation Society, St. Gallen and forms part of the nano-platform “Safe Handling of Nanomaterials” of the German Social Accident Insurance (DGUV).

Enjoy discovering the "Nanorama"!
Kind regards
The Innovation Society

Take a walk through the "Nanorama Lab"

The „Nanorama Lab“ (<http://nano.dguv.de/nanorama/bgrci/>) is the second interactive educational tool on the Nano-Platform „Safe Handling of Nanomaterials“ (<http://nano.dguv.de>). The “Nanorama Lab” offers in-depth insights into the safe handling of nanomaterials and installations used to manufacture or process nanomaterials in laboratories. Complementary to hazard evaluation assessments, it enables users to assess the occupational exposure to nanomaterials and to identify necessary protective measures when handling said materials in laboratories. «Due to the attractive visual implementation and the interactive contents, the „Nanorama Lab“ offers a great introduction to protective measures in laboratories », says Dr. Thomas H. Brock, Head of the Expert Committee on Hazardous Substances of the German Social Accident Insurance Institution

for the raw materials and chemical industry (BG RCI). The "Nanorama Lab" inspires curiosity in users and instigates them to reflect on the conditions in their respective workplaces. The "Nanorama Lab" and the existing **"Nanorama Construction"** will soon be followed by the "Nanorama Metal".
