Breaking News - "Nanorama Production" launched

Dear reader,

We are pleased to present you the new "Nanorama Production". This new interactive tool on the safe handling of nanomaterials in production and processing is now publicly available in English for free at <http://nano.dguv.de/nanorama/bgrci2/en/>. It is the fifth e-learning tool on the [DGUV Nano-Platform](#) and was developed by the German Social Accident Insurance Institution for the raw materials and chemical industry (BG RCI) and the Innovation Society.

Enjoy the new "Nanorama"!

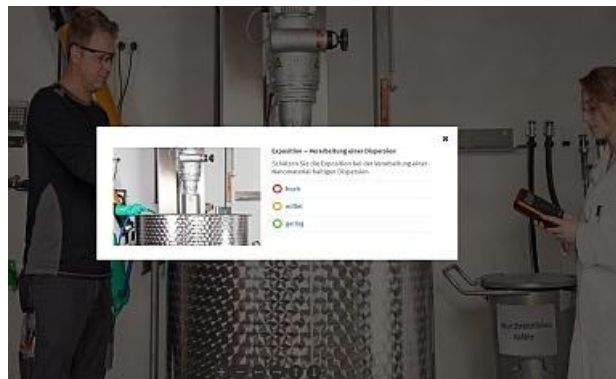

Kind regards,

The Innovation Society

"Nanorama Production" - Safe Production and Processing of Nanomaterials

The new „[Nanorama Production](#)“ is an interactive self-learning and training tool on the safe production and processing of nanomaterials and enables employees to recognise tasks involving the handling of nanomaterials, to roughly estimate potential exposure, and to know the

corresponding protective measures. The „Nanorama Production“ was developed on behalf of the German Social Accident Insurance Institution for the raw materials and chemical industry (BG RCI). The photo shooting took place at the facilities of the company Nanogate AG in Quierschied-Göttelborn (Germany).

The „Nanorama Production“ offers insights into six different work environments: 1. Production, 2. Dispersion of solid nanomaterial, 3. Production of suspensions using basket mills, 4. Processing of dispersions, 5. Storage, and 6. Analysis in the laboratory. It further deals with topics such as safe cleaning, aerosol measurements, explosion protection and industrial hygiene.

The realistic images of the panorama allow employees to immediately recognise tasks they regularly perform. By discovering the “Nanorama”, employees receive valuable information on nanomaterial health and safety aspects on-the-fly. The tool was designed for employees but may also be employed in education by HSE experts.
